ACES Overview

Linking Science, Practice, and Decision Making

ACES: A Community on Ecosystem Services represents a dynamic and growing assembly of professionals, researchers, and policy-makers involved with ecosystem services. The ACES 2016 Conference brings together this community in partnership with **Ecosystem Markets** and the

Ecosystem Services Partnership (ESP)

, providing an open forum to share experiences, methods, and tools for assessing and incorporating ecosystem services into public and private decisions.

The focus of the conference is to link science, practice, and sustainable decision making by bringing together the ecosystem services community from around the United States and the globe. ACES 2016 will bring together leaders in government, NGOs, academia, Native American tribes, and the private sector to advance the use of ecosystem services science and practice in conservation, restoration, resource management, and development decisions.

We hope you will make plans to join more than 500 ecosystem service stakeholders in this collaborative discussion to advance use of an ecosystem services framework for natural resource management and policy.
