

SYMPOSIUM

Dec 6–8 2010 / İSTANBUL
SEDAK HAKKI ELDEM ODITORIUM
FINDIKLI / İSTANBUL

Green Age is so far the most important period that has witnessed a significant development in environmental consciousness. In this era of transformation, concerns over climate change, carbon emissions and energy efficiency highlight the involvement of all stakeholders that play an essential role in ecological planning, architecture and design. The main focus of the symposium is to reduce the human footprint via design that minimizes pollution and consumption and to spread the ecological consciousness throughout the whole society.

In this regard, MSFAU Faculty of Architecture adopts an innovative mission in scientific, academic, technological and research fields by taking the responsibility of further promotion and development of the topic.

The symposium that will be held on December 6,7,8, 2010 aims to raise consciousness by highlighting green ecological solutions in various scales; from built environment to natural environment, from society to individual. Therefore the new step is recognized as GREEN AGE.
